

## Nextwall® VPN

Connecting your business customers, partners, and mobile professionals around the world while ensuring that only the right people see the right information can be difficult. Implementing a **Virtual Private Network (VPN)** is one proven way to accomplish secure, effective communications.

**Nextwall VPN** technology is engineered to provide secure Wide Area Network connectivity to public and private enterprises, ensuring that only authorized users can access the network and that data cannot be intercepted.

**Nextwall VPN** uses industry standard IPSEC technology to create secure tunnels through untrusted networks like the Internet, acting as a gateway to which other VPN-enabled devices can connect. The underlying transport mechanism uses the least amount of bandwidth to achieve the highest level of performance.

## Nextwall® VPN+

Effective communication in the information age requires more than the simple sharing of data. It requires the complex collaboration of audio and video.

**Nextwall VPN+** leverages unique protocols to create the most satisfying, real-time, multimedia experience for applications such as Voice-Over-IP, Video Conferencing, and Video Streaming.
